

ELECTRICAL CONTROL PANELS

Winkle control panels are custom designed to meet the most challenging needs of any electrical application. From crane control panels to meter packages, Winkle will engineer and manufacture electrical control panels for a number of industrial applications. All units are manufactured to incorporate components of choice and are designed to surpass customer expectations. Winkle engineering and production teams also provide expert remanufacturing services for any type of control and all repairs meet or exceed original equipment manufacturer's specifications.

Standard Features:

- 230 VDC or 460 VAC supply voltages
- All front wired constructions allow for ease of maintenance
- Product includes open panels or Nema rated enclosures
- Custom designed to fit electrical control requirements
- Pre-wired discharge or acceleration resistor assemblies
- AC magnet contactor or AC variable frequency drive
- DC clapper type contactors or DC to DC digital drives

Optional Features:

- Special enclosure types and sizes
- Fanning or reduced voltage controllers
- Combination control packages
- Special wire types and mounting channels

Contact Winkle Industries to receive an engineered solution for your specific electrical control panel requirement.
